**30+**

Corp Partners

● Our Origin

# Farming First to Understand the Real Pain

📅 Started July 2024

## The Agritech Gap

We saw companies failing to spread the right solutions. Farmers were labeled as "adamant" or "resistant to change,"

## Core Belief

"Winning within the existing ecosystem accelerates growth." Instead of forcing new behaviors, we chose to build trust first by proving results on the ground.

*"If farmers aren't ready to change, we will do it first to show them the way."*

July 2024

## Became Farmers

Started farming on 17 acres to experience the nuances firsthand.  
No assumptions, just real operational reality.

### The Insight

## Sapling & Right Material Availability : Pain Point

While **other inputs had distribution, high-quality saplings** & Also though demand supply Gap of farm workers

### The Pivot

## Sapling-First Model

- Farmers started visiting our farm for saplings.
- We realized: solve the start of the crop cycle to win the farmer's trust.

## The Problem

# The Sapling Quality Crisis

## Why Farmers Don't Trust Traditional Nurseries

⚠️ Highly Unorganized Sector

### Unorganized & High Mortality

Industry fragmentation leads to zero standards. Farmers face **10-15% mortality**, losing income before the season starts.

### Seed Mixing & Quality Issues

Unfortunately 5-10% mixing is considered normal via unorganized players. Farmers discover wrong varieties **months later at harvest**, causing unrecoverable losses.

### Broken Supply Chain

Distant suppliers and forced batch lifting create logistical inefficiency. Delicate saplings suffer stress during transport, increasing field failures.

### Direct Hit on Profitability

Saplings should boost income via extra crop cycles. Instead, poor quality and inconsistency **slash profits and ROI** significantly.

**15%**

**Mortality Rate**  
Due to Poor Handling

**High**

**Income Loss**  
From Mixed Seeds

"It's not just a dead plant. It's a dead season & direct loss.."

# Commercial Growers- “The Entrepreneur Farmers”

High Frequency, High Value, Fast Decisions

25%  
Of Indian Farmers

## Commercial Grower

High-Value Crops

### Key Traits

#### Fast Decision Speed

Makes weekly input decisions based on immediate crop status.

#### Quality Dependent

High willingness to pay premium for performance & yield.

#### Result-Driven

Loyalty is strictly tied to visible outcomes, not brand.

#### Entrepreneurial mindset

behave like micro-entrepreneurs, have high Advisory dependency

#### Technology adoption

Vegetable Farmers adopt technology for growth.

*"I don't buy products, I buy yield."*

High Yield

**₹3-7L** / Acre

Annual Revenue

Significantly higher than cereal crops (₹40-60k)

High Spend

**₹0.8-2L** / Acre

Agri-Input Spend

High density spend enables unit profitability

Frequent

**2-3** Cycles

Per Year

Weekly touchpoints throughout the year

Fast Liquidity

**45-90** Days

Cash Flow Cycle

Frequent liquidity events drive reinvestment

### Our Advantage

Higher input spend density means we need **fewer farmers** to reach unit profitability.

# Essential Efficiency & Superiority

## 4-Month Cycle Logic + Bio-Boosted Predictability

 One Slide Summary

### The 4-Month Cycle Logic

MONTH 1    MONTH 2    MONTH 3    MONTH 4

Traditional (Direct Seeding)      **4 Months Field Time**

**Agaate Model**      **Only 3 Months Field Time**

NURSERY (OFF-FIELD)

 30 Days Saved / Cycle

Financial Impact

**-15-30%**  
**Seed Usage**  
Zero wastage precision

### Market Benchmarking

**Agaate Advantage**

| Metric                                                                                               | Market Norm | Agaate |
|------------------------------------------------------------------------------------------------------|-------------|--------|
|  Mortality Rate | 10% -15%    | < 5%   |
|  Seed Mixing    | 5%-10%      | 0%     |
|  Root Growth    | Medium      | High   |
|  Chemical Load  | High        | Low    |

# Sapling is the Trust Wedge

Farmers don't buy inputs they buy Trust.

Key Insight  
Win the start, win the season

 Observed from Unit development & interactions

89%

Conversion  
Farmers moving from  
Sapling → Inputs

100%

Achieved in  
Dec 2025

**Control Quality Early**  
Owning the sapling means owning the first 30 days of the crop cycle.

**Visible Outcomes**  
Healthy seedlings are tangible proof of expertise, Know Playbook for Agronomy on App

**Near-Zero CAC**  
Input sales happen automatically as "care instructions" for the seedlings.

# Integrated Unit Model

## Physical Trust First, Technology Second

 One Unit = 3-4-Acres + Store

### CORE ENGINE

## Bio-Boosted Sapling

"The Entry Wedge"

- ✓ 1-2 Acres Farming **Experient Center**
- ✓ **<5% Mortality** (vs 15% Norm)
- ✓ Protected rooting system and Bio-Logically grown
- ✓ 10-20 days earlier harvest

Role: Trust & Customer Acquisition

## Phygita Hyperlocal Store

"Lifecycle Partner"

- ✓ Full range agri-inputs supply
- ✓ Crop-specific advisory schedules
- ✓ Crop- specific Farmer Works need
- ✓ Automated Next action and reminder
- ✓ Crop Progress tracking and solutions

Role: Monetization & LTV

### Tech Roadmap: AI-Managed Ecosystem

Automating precision & advisory scaling

● Computer Vision Grading

● Hyperlocal Weather Data

● Predictive Pest Models

# What We Understand from Sapling Orders

From Individual Data to Shared Community Wisdom

 Hyperlocal Data Network

## Crop Lifecycle Intelligence ( Local Area Information)

One order reveals 4+ months of Precise input needs

★ Entry Point

### Sapling Stage

Days 20-30

Land needs before Transplant

- Basal Dose
- Irrigation Needed
- Mulching Hole pattern

### Vegetative Growth

Days 45-60

Fertilizers for Crop

- Fertilizers Schedule

### Flowering & Fruiting

Days 7-60 (Harvest)

Diseases expected  
Pest Expected

- Preventive Crop Schedule
- Curative -Level of infestation
- Traps & Lures

Productivity needs

- Productivity Boosters

Cluster: Weather & issues

- Weather Crop Level Advisory
- Diseses/ pest alerts

## Community & Experience Network

Farmers sharing local innovations & insights

Local Feed

• Live Innovations

### 💡 Available Farm workers

"There are 10 Farm workers available near 5Km of your area "

### 💬 Local Pest Intelligence

- 25 km radius disease heatmap
- Farmer-reported pest outbreak
- Spray advisory based on stage
- "Others sprayed this" data"

### 👤 Peer Comparison- Anonymous

- Yield comparison
- Top performing farms in cluster
- Variety performance data by village

### 🌱 Sowing Trends

Community shift: 40% increase in high-yield Cauliflower this season.

**The Knowledge Loop:** It's not just data—it's shared wisdom. Agaate aggregates individual farmer experiments into verified local best practices for the whole community. All this will get **Automated with Tech to enable automation in farmers journey**

# Building Tech what Farmer need (Crop Memory System)

From one interaction to a season-by-season farm history & planning platform

One order unlocks 4+ months of ongoing farmer engagement.

Individual farmer data becomes shared community intelligence.

DATA FLYWHEEL: Farmer History > Better Planning > Better Yield > More Trust > Precise information > Higher Engagement.

## Monetization Layer

"Agaate preserves every crop season so farmers plan the next one smarter."

Repeat Sales

High Retention
